

NEW Revolutionary Sponges Are Here

3 Reasons You'll Love Our New Artifact-Free Positioning Sponges

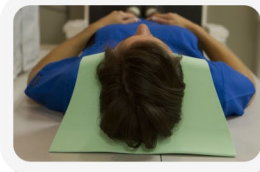

It might sound funny to be excited about positioning sponges. Then again, if you have to use them frequently during imaging processes (and you probably do), then you're aware of some of the problems that have become just "a part of the territory" when working with positioning sponges. Depending on the material they're made of, they can be difficult to clean. More important is the problem of leaving line artifacts on images and, as we all know, artifacts are the bane of a technologist's existence. What if we told you that we have a brand new type of positioning sponge that is easy to clean and leaves absolutely no artifacts behind? We're serious. Now you see why we're excited about offering the new Techno-Aide artifact-free positioning sponges.

Artifact Free! Need We Say More? For many technologists, this is the only selling point you'll need. Eliminating image artifacts is one of the most important roles in the job of a technologist. And unfortunately, artifacts from sponges have become widely accepted because it's just the way things are. Or should I say the way things *were*. Don't accept line artifacts as a part of the status quo and be the most popular of your co-workers by delivering images without the nagging artifacts caused by old-fashioned positioning sponges.

No More Hassle in Cleaning Those Foam Sponges! Some sponges and wedges claim to reduce the artifacts left behind but these are often positioning sponges that are very difficult to clean afterwards. Maybe you've had to cover the sponge in a plastic material just so you won't have to worry about the cleaning and disinfecting process. Our sponges give you the best of both worlds - no line artifacts AND are easy to clean. Luckily for you, these artifact-free positioning sponges have a clear coating that make for easy cleaning every time.

More Comfort for Patients - A Bonus For Everyone. In addition to the revolutionary quality of being artifact-free and the added benefit of being easy to clean, these positioning aids also provide comfort to patients. Sturdy enough to ensure stability, they also boast the level of comfort that you find in non-vinyl sponges. No slipping and sliding during imaging procedures.

Techno-Aide is the sole manufacturer for these revolutionary positioning aids. We are so proud to introduce this product to the world and we are absolutely sure that once you try them, they will be your new favorite accessory. Artifact-free, easy to clean and providing an extra level of comfort to patients, these positioning aids are going to make major waves in the technologist community. Get in on the ground floor by ordering a set today! Come visit our website to learn more about these amazing positioning aids.
